

Amendments to the Specification

IN THE WRITTEN DESCRIPTION

Please replace paragraph [0055.1] with the following amended paragraph:

[0055.1] FIG. 4 shows a plan view of a blank ~~having~~ including a diagrammatical representation of a hologram and a diagrammatical representation of a window thereon.

Please replace paragraph [0075] with the following amended paragraph:

[0075] One of the consumer-relevant advantages in accordance with the invention is that the corresponding container is characterized by some visual particularities. For example, the container can be prepared in various shapes, such as oval, circular, approximately square or even polygonal as well as bean-shaped and the like. Due to the transparency in particular in the visible spectral region, the contents of the container is moreover also visible without having to open it. Both the filling level and the condition of the food can be checked in a simple manner. The various possibilities of the print result in further visual advantages. The print can also have such a design that there is a glossy effect which particularly emphasizes the print optically. Moreover, the print can have a three-dimensional effect. It is possible to provide the complete container with a print except for at least one window 28 as diagrammatically represented in FIG. 4. The print can be formed by a hologram 30 as diagrammatically represented in FIG. 4 which offers further optical advantages. Moreover, the print can at least partially become visible only after the food has been taken out, which makes it possible, for example, to inform the consumer about a prize he won or the like.

Please add the following new paragraph after paragraph [0075]:

[0075.1] Since the window 28 and hologram 30 are diagrammatical representations with dashed lines, they merely explain, and thus do not constitute actual physical dimensions or a shape for a window or hologram of a container.
